

Dear Investors,

World is not a safe place, but India is better placed

Sep-22 month saw all the global concerns resurfacing back to the fore. It started with red hot inflation reading from the US, followed by interest rate hikes, some political induced economic turmoil, and concerns on the financial health of leading financial institutions. Equity markets across the board saw a sharp correction as so much of it happened in just about 15-20 days. Policy rates across the world were increased in the range of 0.25% to 1.25%, over the last one month. In many cases, the policy rates are higher than the previous peaks in last 10-15 years. On the contrary, current interest rates in India are significantly lower than the peaks seen in last 10-15 years. While India is not completely immune to the developments in the western world in the short term, we discuss in this note as to why our long-term growth outlook of Indian economy remains upbeat.

Global bond yield crossed its previous peak of last 15 years

India economic condition remains for more robust driven by multiple parameters like (a) moderate inflationary pressures, (b) strong GDP growth and (c) resilient investment climate. Despite the tough global environment, government tax revenues now stand at 20% above FY20 levels. Tax buoyancy is witnessed across both direct and indirect tax collections. Non-oil imports continue to remain robust. Demand for real estate continues to remain sanguine, despite the hike in interest rates. This is all indicative of a strong underlying growth fundamentals of the Indian economy. On the flip side, we do have short term problems of high current account deficit, which is further intensified by INR depreciation. However, one should be cognizant of the fact that compared to other emerging markets (and even several developed markets), INR depreciation has been considerably lower.

In the current environment, recovery in India's capex cycle has been looked upon with skepticism. However, we tend to differ. We firmly believe that capex cycle is essentially a function of capacity utilization and underlying demand, as these factors determine the viability of a new investment. Over the last 15 years, there have been several instances of benign interest rate environment. However lower interest rates by itself haven't been able to kick start the investment cycle environment in the country. We believe that capex cycle will be a key theme in India for at least next 4-5 years and is unlikely to be perturbed by hikes in interest rates. Despite the sharp increase in repo rates in India over the last 3 months, credit growth has seen a multi month high in the month of Sep-22.

We are watchful of the economic and geopolitical events unfolding on the global front. While a correction in the developed markets will certainly have a cascading impact on Indian markets as well. We believe these are unlikely to dislocate the growth fundamentals of India economy. Over the next 5 years growth in Indian economy is a function of both consumption and investment, which hasn't been the case for last 10-12 years. Global upheaval can at best cause a deferral in the desired level of growth, in our opinion. We expect our portfolio performance to remain robust on the back of strong growth prospects of our portfolio companies. Most of our portfolio companies have moderate to low debt, which enables them to withstand the current global economic storm better than its peers.

Happy investing!
